PROFESSIONAL OVERVIEW

Full-stack Software Engineer with 3+ years of professional experience leading the design and delivery of production, cloud-native applications in Agile environments. Strong backend expertise in C#/.NET, paired with hands-on leadership in Angular-based front-end architecture, delivering modern, maintainable UIs that replace legacy systems. Proven ability to own features end-to-end—from technical design and implementation through testing, CI/CD, deployment, and production support. Known for setting engineering standards, improving developer workflows, and driving measurable business impact through clean architecture, automation, and cross-functional collaboration.

EDUCATION

- General Assembly Software-Engineering Bootcamp (Dec 2021)
- Multiverse Software Engineering Bootcamp Certificate (In Progress)

CORE SKILLS

- Languages: C# (.NET), Python, JavaScript/TypeScript, SQL
- Frameworks & Platforms: .NET Web API, Node.js/Express, Angular, React
- Architecture: REST APIs, microservices, event-driven patterns (foundational), cloud-native design
- Cloud & DevOps: AWS (S3, EC2 – hands-on; Lambda – working knowledge), Azure, Docker, CI/CD (GitHub Actions)
- Testing & Quality: Unit testing (xUnit/NUnit, Jest), automated regression testing, code reviews, static analysis
- Data: SQL Server, PostgreSQL, MongoDB
- Tools & Practices: Git/GitHub, Visual Studio, Postman, Linux/Bash (working knowledge), Agile/Scrum, SDLC automation

WORK EXPERIENCE

Software Engineer

HP Inc | 2025 – present

- Built and shipped production modules for PRISM, an enterprise content management platform, using Angular 16, Angular Material, TypeScript, and .NET RESTful APIs.
- Replaced a legacy Job Status dashboard that had no filtering, sorting, or date controls with a full operational monitoring tool — giving the team real-time visibility into job health and faster response to failures, with an estimated ~$15K/year in recovered productivity.
- Took over SME Groups administration from a clunky legacy tool and built a clean self-service module with search, bulk actions, form validation, client-side caching, and Excel export — cutting the need for developer involvement in routine admin work, estimated at ~$12K/year in saved overhead.
- Built out a Data Types governance module so teams could manage reference data themselves — with searchable views, create/edit dialogs, validation, and per-record exports — reducing the kind of downstream content errors that quietly cost time, estimated at ~$10K/year.
- Wired up all modules to RESTful APIs with JWT authentication and role-based capability checks, making sure the right people had access to the right things in production.
- Worked in Agile sprints alongside engineering, QA, and operations — from planning through delivery and production support.

Software Engineer

General Assembly | Sep 2021 – Dec 2021

- Built full-stack applications using Python, JavaScript, Node.js, Express, and React in Agile teams.
- Designed REST APIs and backend services with PostgreSQL and MongoDB, applying modern development fundamentals.
- Practiced test-driven development principles, version control, and collaborative code reviews.

Credit Controller

S3 | Jan 2023 – Dec 2024

- Automated reporting and reconciliation workflows using advanced Excel techniques, improving accuracy and operational efficiency.
- Strengthened analytical thinking, attention to detail, and cross-functional communication in a data-driven environment.

PROJECTS

PRISM UI Modernization: Modernized a legacy enterprise content platform to Angular 16 standalone + .NET APIs, delivering job monitoring, admin, and data governance modules with ~$37K/year in measurable productivity savings.

Text-Analysis-App: Developed a serverless text analysis SPA using Angular + AWS Comprehend (API Gateway/Lambda) with typed API models, robust UI states, CORS handling, and S3 static deployment.

Pixel Forge: Designed and shipped a front-end project with an end-to-end CI/CD pipeline (GitHub Actions), automating builds, tests, and deployments to enforce repeatable, production-grade release workflows.
